 Flame-retardant polystyrene resin compsn. (I) having excellent self-extinguishing properties on melt down comprises (A) rubber-modified polystyrene resin(s), 100 pts.wt.; (B) ether(s) derived from tetrabromobisphenol A(B1) and polyhalogenated aliphatic cpd(s). (B2), 4-8 pts.wt., (C) polyhalogenated diphenylalkane(s), (D) antimony trioxide, (E) organic polysiloxane(s), and satisfies (1) (C)/(B) = 20-50% and ((B)+(C))/(I) = 10 wt.% or less, (2) 9D)/(B) = 20-50%, (3) silicone in (E)/((A)+(B)+(C)+(D)) = 0.0005-0.05 wt.%.
 USE - (I) is useful as moulding material, esp. for housings of various electr(on)ic instruments or material for preparation of parts of electr(on)ic instruments such as toner cartridge, toner container, etc.
 ADVANTAGE - (I) has excellent self-extinguishing properties in addition to resistance to heat and impact and thermal stability.
